

CITY OF  
**LONG BEACH GAS & OIL**

2016 CALENDAR

# From the DIRECTOR

Dear Valued Customer,

*F*or the past 91 years, Long Beach Gas and Oil has been providing natural gas utility service to the residents and businesses of the cities of Long Beach and Signal Hill. As a small token of appreciation for allowing us to serve you, it is my pleasure to provide to you the 2016 Long Beach Gas and Oil calendar. Because your continued safety is our number one priority, the calendar is designed to provide useful information on the proper use of natural gas to protect you and your family.

As we have since 1924, Long Beach Gas and Oil will do our very best to safely provide to you low cost natural gas, while always striving to deliver the very best in customer service - whether it is taking your telephone call for service requests, coming into your home to inspect your gas appliances, responding 24 hours a day to emergency calls, or providing continual maintenance on our 1,900 miles of underground pipelines. We work closely with our federal regulators, meeting all compliance standards, and ensuring the highest degree of pipeline system integrity.

In 2016, we will continue to invest in upgrading the pipeline infrastructure, with a focus on replacing older sections of the system. We continue to implement new technologies to improve the provision of quality customer service and operational efficiency.

On behalf of the employees of Long Beach Gas and Oil, we look forward to continuing to serve you and wish all in your family a safe and healthy 2016.

Edward Farrell

Acting Director of Long Beach Gas and Oil

# INFORMATION & SAFETY TIPS

## NATURAL GAS

### WHAT IS NATURAL GAS?

Natural gas is made up of hydrocarbon gases, primarily methane, which naturally occurs in rock formations deep below the earth's surface. The natural gas is withdrawn and transported to homes and businesses through an underground system of pipes. Natural gas is a fuel of choice because it is efficient, clean-burning (emits few pollutants), plentiful, and safe.

### NATURAL GAS SAFETY PRECAUTIONS

Natural gas is colorless, odorless, lighter than air, and nontoxic. Natural gas by itself will not burn, but with the proper mixture of natural gas and air combined with an ignition source, combustion can occur. An odorant that smells like rotten eggs is added to natural gas so that it can be detected. If the smell of natural gas is present inside your home or business:

#### DO NOT

- Smoke, strike a match, use a flashlight, or lighter
- Operate any electrical switches or appliance controls
- Use a phone
- Relight any natural gas equipment
- Start a car

#### DO

- Check if any appliances have been left on or if a pilot light has been extinguished
- Open doors and windows to dissipate accumulated natural gas
- Evacuate the building immediately and call LBGO at (562) 570-2140

## CARBON MONOXIDE

### WHAT IS CARBON MONOXIDE?

Carbon monoxide (CO) is an odorless, tasteless, and non-visible natural gas. Burning any fuel produces CO. CO can be formed when fuels such as charcoal, gasoline, oil, propane, or wood are burned without a sufficient supply of air. CO has been labeled the "silent killer." The symptoms of low level exposure (headache, dizziness, nausea, and fatigue) are easily mistaken for the flu.

### HOW CAN I PREVENT CARBON MONOXIDE EXPOSURE?

#### DO NOT

- Use a natural gas oven to heat your home, even for a short time
- Use a generator, charcoal grill, camp stove, or other gasoline or charcoal-burning device inside your home or garage
- Sleep in any room with an unvented natural gas or kerosene space heater
- Run a car or truck inside a garage attached to your home
- Burn anything in a stove or fireplace that is not vented

POTENTIAL SOURCES OF CARBON MONOXIDE  
IN THE HOME

#### DO

- Have a qualified service technician inspect all your natural gas appliances
- Install at least one battery-operated CO detector in your home
- Seek prompt medical attention if you suspect CO poisoning and are feeling dizzy, light-headed, or nauseous

# INFORMACIÓN y SUGERENCIAS PARA LA SEGURIDAD

## GAS NATURAL - ¿QUÉ ES EL GAS NATURAL?

El gas natural está hecho de gases hidrocarburos, principalmente metano, que ocurre naturalmente en formaciones rocosas en las partes más profundas debajo de la superficie terrestre. Se extrae y transporta el gas natural a casas y negocios mediante un sistema de conductos subterráneos. El gas natural es el combustible preferido porque rinde mucho, es de combustión limpia (emite pocos contaminantes), abundante y seguro.

## PRECAUCIONES PARA NO CORRER PELIGRO CON EL GAS NATURAL

El gas natural es incoloro e inodoro, más liviano que el aire y no tóxico. El gas natural no se quema solo, pero con la mezcla adecuada de gas natural y aire combinada con una fuente de encendido, la combustión puede ocurrir. Se agrega un olor a huevos podridos al gas natural para poderlo detectar. Si huele gas natural adentro de su casa o negocio:

### NO

- Fume, encienda una cerilla, use una linterna, ni un encendedor
- Opere un interruptor eléctrico o control de aparato electrodoméstico
- Use el teléfono
- Encienda nuevamente cualquier equipo de gas natural
- Arranque un coche

### SÍ

- Revise si los electrodomésticos están encendidos o si una llama piloto se ha extinguido
- Abra puertas y ventanas para disipar los gases naturales acumulados
- Desocupe el edificio inmediatamente y llame a LBGO al (562) 570-2140

## MONÓXIDO DE CARBONO - ¿QUÉ ES EL MONÓXIDO DE CARBONO?

El monóxido de carbono (CO) es un gas natural inodoro, sin sabor e invisible. Quemar cualquier combustible produce CO. Se puede formar el CO cuando se queman combustibles como carbón de leña, gasolina, petróleo, propano o madera sin suficiente aire. El CO ha sido llamado el "asesino silencioso". Los síntomas de una exposición de bajo nivel (dolores de cabeza, mareos, náuseas y fatiga) se confunden fácilmente con los de la gripe.

## ¿CÓMO PUEDO PREVENIR LA EXPOSICIÓN AL MONÓXIDO DE CARBONO?

### NO

- Use un horno del gas natural para calentar la casa, aunque sea por corto tiempo
- Use un generador, parrilla de carbón de leña, estufa de campamento u otro artefacto que queme gasolina o carbón de leña dentro de su casa o garaje
- Duerma en un cuarto con calefactor de gas natural o queroseno
- Utilice un coche o camión dentro de un garaje adjunto a su casa
- Queme nada en una estufa o chimenea sin ventilación

### SÍ

- Haga que un técnico calificado inspeccione todos los electrodomésticos del gas natural
- Instale por lo menos un detector de CO que funciona con pilas en su casa
- Solicite atención médica rápida si sospecha envenenamiento con CO y se siente mareado, aturdido o con náuseas

# NATURAL GAS PIPELINES

## PIPELINE SAFETY DEPENDS ON ALL OF US

Nationally, Americans consume about 60 billion cubic feet of natural gas each day. Long Beach supplies about 25 million cubic feet daily to its customers. Pipelines are the safest means of transporting natural gas. There are over 1,900 miles of natural gas pipeline in our community. LBGO's primary focus in operating these pipelines is to ensure the public's safety. LBGO regularly monitors its pipelines and performs periodic leak patrols along all pipeline routes to ensure the safety and integrity of those lines.

In addition, LBGO's Operations Control Center monitors the natural gas pressure in the pipeline system 24 hours a day, 7 days a week. The Operations Control Center immediately implements response measures, should an abnormal condition be detected. Natural gas pipelines are generally made of steel or polyethylene plastic, covered with a protective coating (if made of steel), and buried several feet underground. Producers and suppliers may bury natural gas piping in different locations such as in the street, in alleyways, and on private property. We encourage community members to be aware of any natural gas pipelines and to contact LBGO in case of an emergency.

LBGO hopes these safety guidelines will provide important information to help identify and respond to a pipeline incident, and to prevent incidents from occurring through effective excavation and land use practices.

## ACCESS

Natural gas service lines follow a path across privately-owned property from the City's meter to the street or alleyway where the main pipeline is buried. It is important that service line paths be kept free from structures and other obstructions to provide access to the pipeline for maintenance, as well as in the event of an emergency.

**LA SEGURIDAD DE LOS CONDUCTOS DEPENDE DE TODOS NOSOTROS**

En todo el país, los estadounidenses consumen unos 60 mil millones de pies cúbicos del gas natural por día. Long Beach provee diariamente unos 25 mil millones de pies cúbicos a sus clientes. Los conductos son el medio más seguro de transportar el gas natural. Hay más de 1,900 millas de conductos de gas natural en su comunidad. El enfoque principal de LBGO al operar estos conductos es asegurarse de la seguridad pública. LBGO revisa con regularidad sus conductos y patrulla periódicamente para detectar fugas de gas en todas las rutas de conductos para asegurarse de la seguridad e integridad de esas líneas.

Además, el Centro del Control de Operaciones de LBGO vigila la presión del gas natural en el sistema de conductos las 24 horas del día y los 7 días de la semana. El Centro del Control de Operaciones inmediatamente implementa medidas para responder, si se detectara algo anormal. Los conductos de gas natural generalmente están hechos de acero o plástico de polietileno y cubiertos con una envoltura protectora (si están hechos de acero) y enterrados varios pies bajo tierra. Los productores y proveedores pueden enterrar conductos de gas natural en varios lugares, por ejemplo, en calles, callejones y propiedad privada. Alentamos a los miembros de la comunidad a enterarse de cualquier conducto de gas natural y a comunicarse con LBGO en caso de emergencia.

LBGO espera que estas pautas de seguridad proporcionen información importante para ayudar a identificar y a reaccionar a un incidente con un conducto y para prevenir que éstos ocurran mediante métodos eficaces de excavación y uso del terreno.

**ACCESO**

Las líneas de servicio del gas natural siguen un camino atravesando las propiedades privadas desde el medidor de la Ciudad hasta la calle o callejón donde el conducto principal está enterrado. Los caminos de las líneas de servicio tienen que mantenerse libres de estructuras y otras obstrucciones para que pueda accederse al conducto para su mantenimiento así como en el caso de una emergencia.

# EMERGENCY PROCEDURES

## BEFORE YOU DIG ... CALL DIGALERT!

The most likely type of an emergency is a leak caused by striking a pipeline while digging. Call DigAlert at 811, two business days prior to digging. A representative will locate and mark the gas service line for you. If contact is made with a natural gas pipeline, call LBGO at (562) 570-2140 to identify possible damage.

## REPORTING AN EMERGENCY

Move away from the suspected pipeline leak and call 911 or LBGO immediately, if you:

- Smell a strong gas odor
- Hear a loud hissing sound
- See dirt blowing up from a hole
- Observe bubbling in or around roadways, sidewalks, or public access areas

While in the area of a possible gas leak, do not:

- Light a match or smoke
- Use a phone
- Start any motor vehicle

## EMERGENCY GAS VALVE SHUTOFF

- Have a wrench stored nearby
- Using the wrench, give the shut off valve a quarter turn in either direction so that it runs crosswise on the pipe
- The valve is now shut off

Shut off gas valve **ONLY** if you smell gas after an earthquake.

## QUÉ HACER EN EMERGENCIAS

### ANTES DE EXCAVAR...LLAME A DIGALERT!

El tipo de emergencia más probable es una fuga causada por un golpe al conducto mientras excava. Llame a DigAlert al 811, dos días hábiles antes de excavar. Un representante ubicará y marcará la línea de servicio del gas para usted. Si toca un conducto de gas natural, llame a LBGO al (562) 570-2140 para identificar posibles daños.

### CÓMO COMUNICAR UNA EMERGENCIA

Aléjese de la fuga sospechada del conducto y llame al 911 o a LBGO inmediatamente, si:

- Huele mucho a gas
- Oye un sonido fuerte de siseo
- Ve tierra volando de un agujero
- Observa burbujas en o alrededor de las calles, banquetas o áreas de acceso público

Mientras está en el área de una posible fuga de gas, no:

- Encienda una cerilla ni fume
- Use un teléfono
- Arranque ningún vehículo automotor

### CIERRE LA VÁLVULA EN CASO DE EMERGENCIA

- Tenga una llave guardada cerca
- Usando la llave, gire la válvula de cierre un cuarto de vuelta en cualquier dirección para que quede en forma de cruz en el tubo
- De esa forma la válvula ya está cerrada

Cierra la válvula de gas **SOLAMENTE** si huele a gas después de un terremoto.
